. . Our

New Bedford Campus

North

Southeastern Massachusetts Technological Institute was created in 1960 by an act of the General Court on the recommendation of the governor to provide a diversified educational program for the Southeastern Massachusetts area and for the Commonwealth. In enacting this legislation, the General Court directed that Southeastern Massachusetts Technological Institute assume the responsibilities of the two existing colleges in the area—Bradford Durfee College of Technology and New Bedford Institute of Technology.

The consolidation of these institutions into Southeastern Massachusetts Technological Institute was effected in 1964 and since that time the Institute has engaged in an intensive program of development.

Foreword

Fall River Campus

Dartmouth Campus

The most exciting developments at Southeastern Massachusetts Technological Institute during the past several years have taken place on the new campus under construction on a wooded 730 acre plot in North Dartmouth. The campus, with its functional master plan and ruggedly handsome buildings designed by architect Paul Rudolph, is being rushed to completion.

The beautifully landscaped campus will contain parking facilities and playing fields for all the major sports. Thus, Southeastern Massachusetts Technological Institute's students will be able to pursue a wide range of programs in an exceptionally stimulating and harmonious academic environment.

Dedication

Through the years a distinguished gentleman has walked our halls, giving a polite nod or a friendly hello to everyone he meets. This man, known to all, has dedicated himself to the tedious task of handling our problems, advising and guiding us through our years of college life.

He knows no college student is without need of a friend, and we the students of Southeastern Massachusetts Technological Institute need not look any further than the Dean's Office to find that needed friend.

We the student body would like to show in some way our appreciation for his help in our need, for his encouragement in our despair, and for his willingness in our want.

For these reasons, and many more which words cannot express, to you, Dean Augustus Silva, we dedicate the yearbook of Nineteen Hundred and Sixty-six.

AUGUSTUS SILVA, A.B., A.M.

In the school year of 65-66, the students at S.M.T.I. had the occasion to meet the area Senator to Washington, D. C., Senator Edward Kennedy. Senator Kennedy came to the Bank Street Armory. While there he gave a speech about Vietnam and the problems of the refugees. He told that with increased war there would be increased poverty and more refugees.

After Senator Kennedy's speech, there was a question and answer period. Here the Senator answered questions concerning foreign as well as domestic affairs.

Senator Kennedy was well received by both student and faculty.

Dr. Driscoll, President of Southeastern Massachusetts Technological Institute, is known for his power of persuasion. He is known to get things done and to get them done right. Dr. Driscoll has stood steadfast against all opposition by those who have wished to alter the new campus. More important, he has insisted that Southeastern Massachusetts Technological Institute be permitted to offer the best possible educational opportunity.

If one were to look back into Dr. Driscoll's personal records, he would find that Dr. Driscoll's great interest in education seemed to have come rather suddenly. As Mr. Driscoll, he served in World War II as a Marine pilot in the South Pacific. Upon his discharge, he had reached the rank of Captain. Going through the war he seems to have come to know that education is the substitute for ignorance and to have decided it his duty to do something about it.

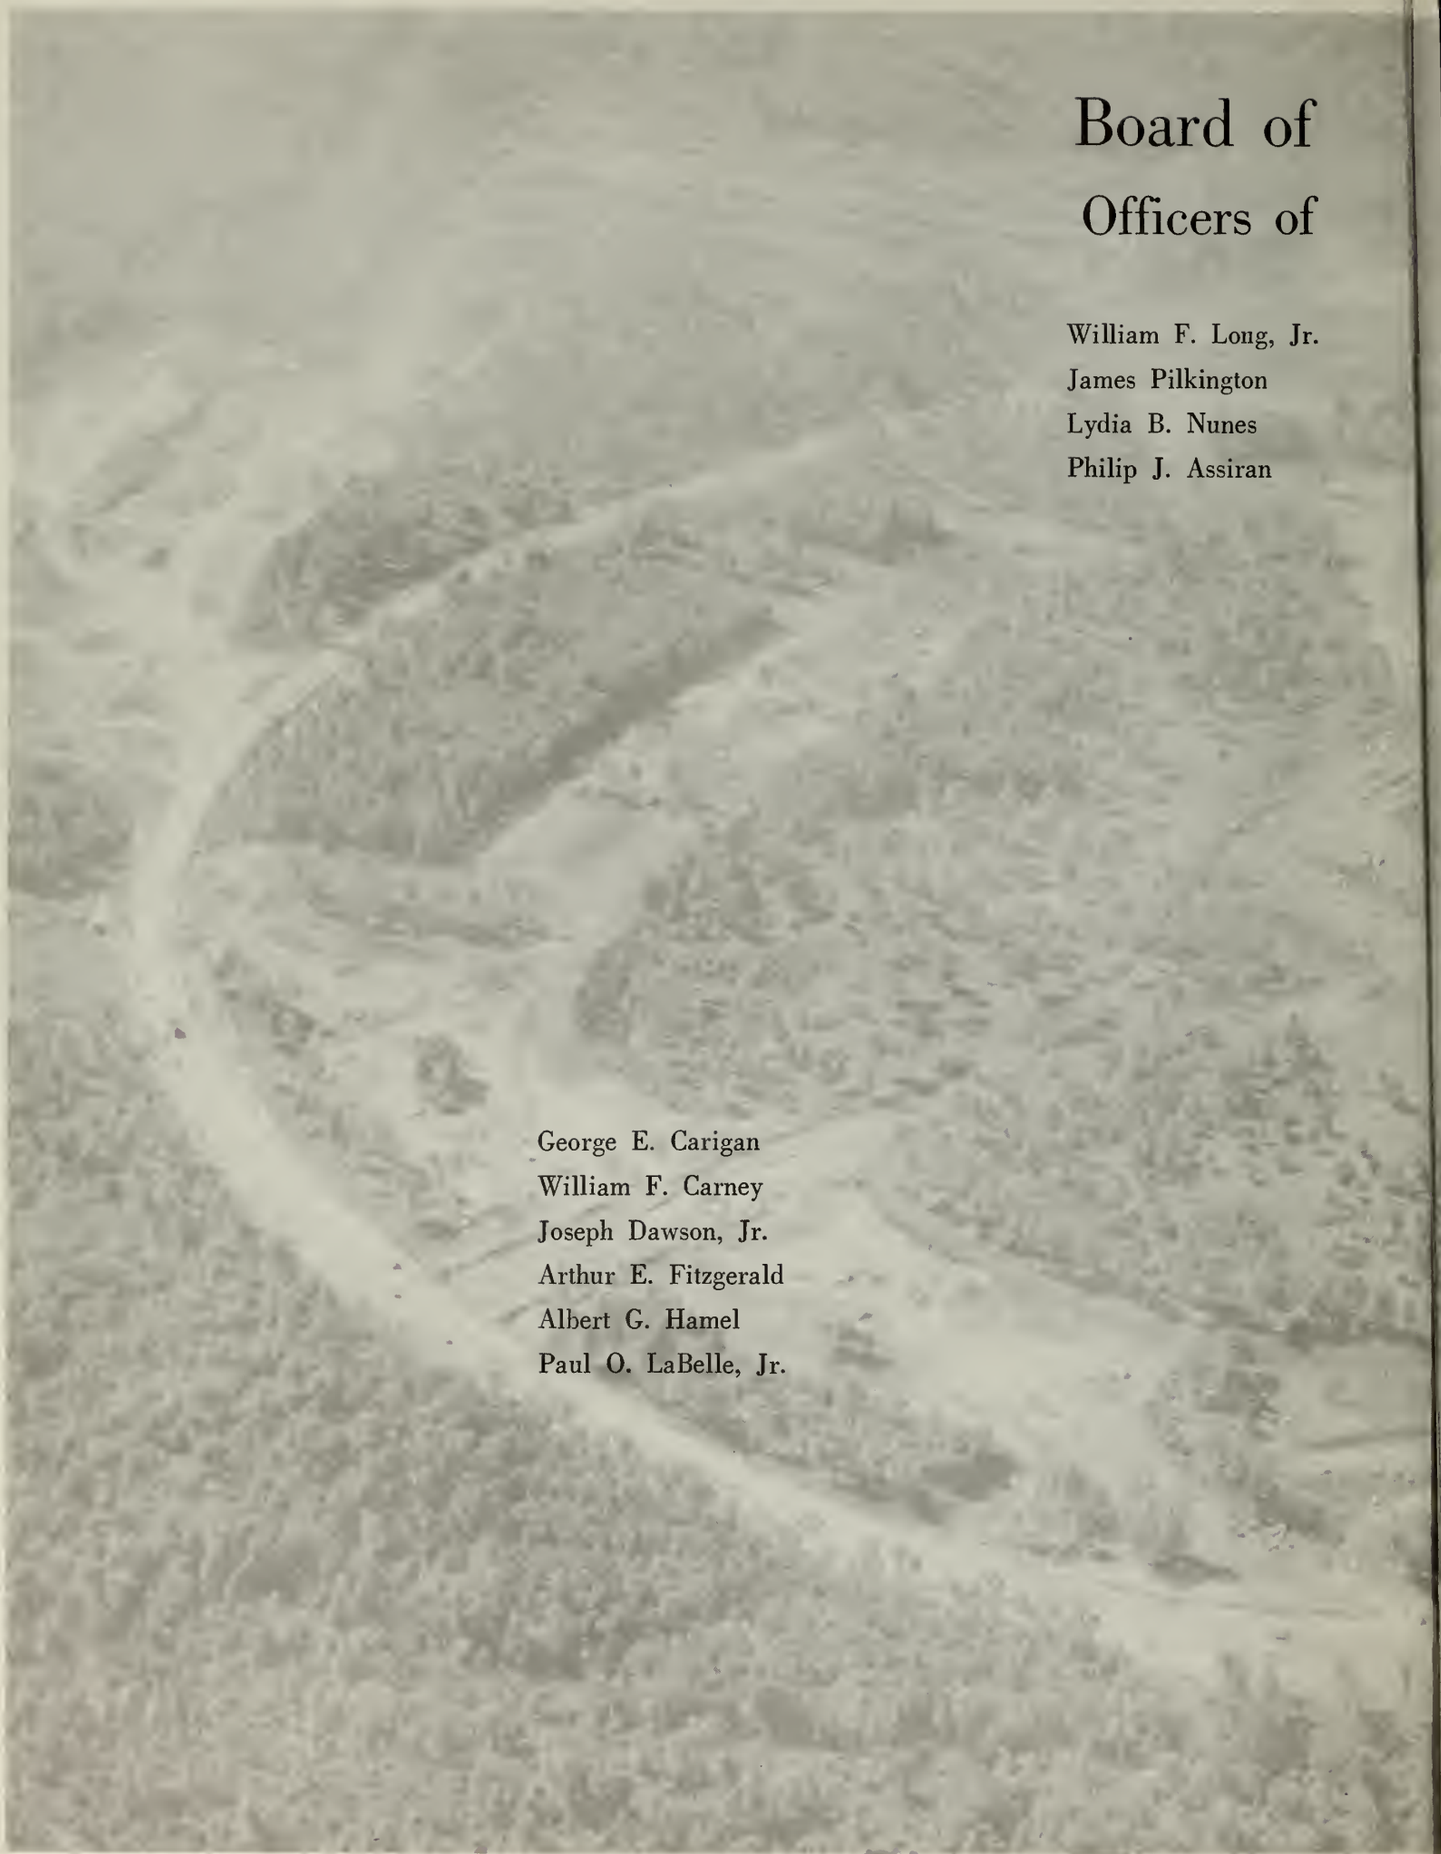

Hence came his decision to go to Harvard University undergraduate and graduate schools. In 1952 he received his B.A. In 1953 he received his Masters, showing a continuing drive for education. He was granted a teaching fellowship at Harvard and in 1957 he received his Doctorate. Soon thereafter he became a teacher and coach at Needham, Massachusetts. Following this, he took a position at Boston College as Administrator and teacher. He was in his fifth year at Boston College when he was called to Southeastern Massachusetts Technological Institute.

Dr. Driscoll, teacher and administrator, now heads Southeastern Massachusetts Technological Institute. With his forcefulness, his unswerving drive, along with his foresight and experience, Dr. Driscoll is the very leader needed to make Southeastern Massachusetts Technological Institute grow in stature and reputation.

With the start of the 1965-66 school year S.M.T.I. received the largest freshman class in its history.

On registration day everyone was busy scheduling and rescheduling their courses, changing their late labs and trying to select an elective.

The students starting class.

Our bookstore manager, busily handing out books.

The start of a new day

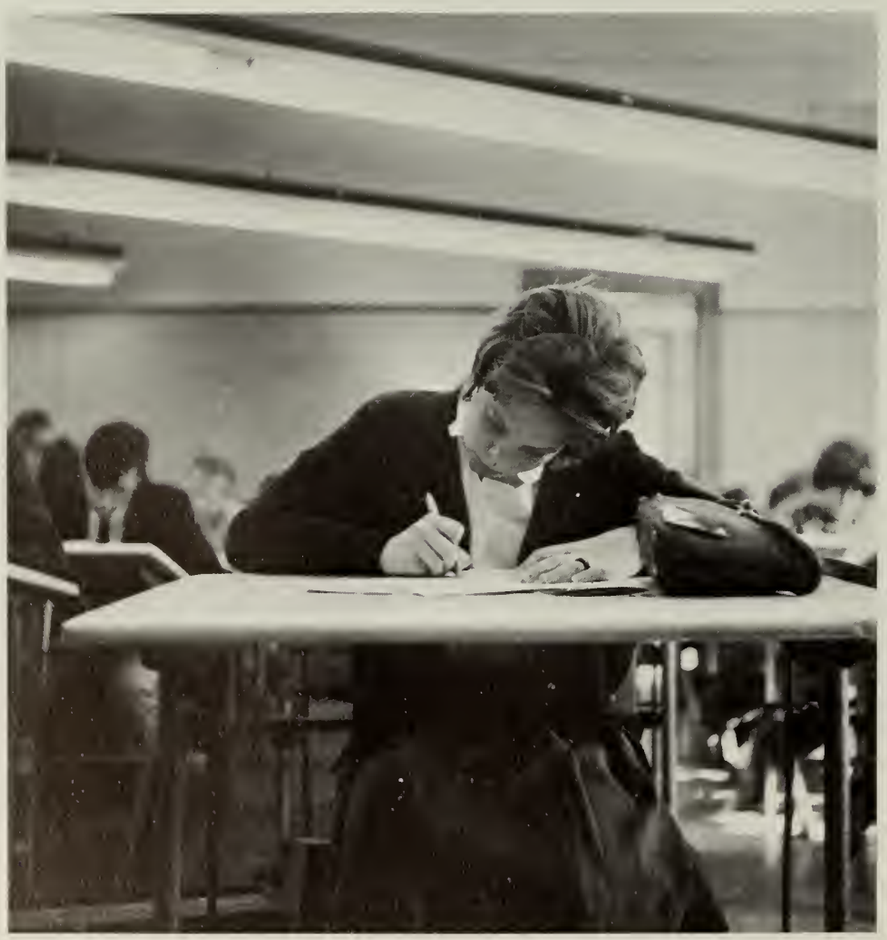

STUDENT LIFE

ACTIVITIES SUPPLY NECESSARY INGREDIENTS FOR BALANCED EDUCATION

Concentration

This is the force which directs our lives. We work hard—in conferences with instructors, in lecture classes, in individual study and in special research projects. Before we can realize, another year has slipped away—another year in preparation for a lifetime of work.

QUEENS

Miss S.M.T.I. 1965-1966
Nancy O'Hara

Queen of the Scollop Festival
Miss Betty Connell

The first Winter Carnival Ball held by SMTI at Lincoln Park Ballroom, was highlighted by the crowning of the Queen Miss Arlene Dutra. The Queen's Court was comprised of from left to right, Miss Jean Perry, Miss Paula Souza, Miss Dutra, Miss Paulette Gamache, and Miss Pamela Marsden.

Special
TEXTILE DICTIONARY
for BEST RESULTS
in Textile Processing

C

Corobex (Kôr 'a-bex)

A durable anti-bacterial additive for textiles. Provides fixed, lasting protection against germs, mildew, perspiration odors and other odors of bacterial origin.

Easily applied during dyeing or finishing operations. Will cause no shade change in dyed and printed colors, no yellowing of whites. Does not affect the hand of the finished goods. Compatible with most types of finishing materials.

D

Discolite[2] (dĭs′kō.līte)

Concentrated sodium sulphoxylate formaldehyde available in lump, pea, rice or powder form.

A powerful reducing agent, stable at high temperatures. Widely used to effect reduction and solution of vat colors, and for discharge effects when applied to colored grounds. Effective when mixed with vat colors and discharge pastes wherever the reducing agent must retain its reducing power after being dried into the fabric.

Dispersall (dĭs.pûr′sal)

A long chain ethylene oxide condensate in the form of a colorless, neutral, somewhat viscous liquid. Fully resistant to hard water, and miscible with water in all proportions. A retardant and leveling assistant in vat dyeing.

Used widely as a dispersing agent in dyeing synthetic fibers with disperse colors and for fast color salts and bases in Napthol dyeing and printing.

Effective in stripping to prevent redeposition of the color on stripped goods.

N

Neofinish (Ne/.O.Finish)

Non-Ionic softener dispersible in hot water, suitable for all textile fibres, both natural and synthetic. Compatible with all types of finishing materials, including resin finishes. No development of color or odor in goods finished with Neofinish, even in storage. No yellowing at time of application.

Neowet (nē′ō.wĕt)

Complex Polyethelene Ether in the form of a pale yellow, slightly viscous liquid.

A non-ionic surface active wetting agent, effective at all temperatures. Completely compatible with enzymatic desizing agents and readily soluble in water. Contains 33 1/3% active ingredients. Widely used in scouring all types of textile fabrics and for general wetting purposes.

Neowet X (nē′ō.wĕt)

Organic Ether Sulphonate in the form of a water white slightly viscous liquid.

An anionic surface active wetting agent, effective at all temperatures. Does not affect enzyme activity in desizing. Compatible with hydrogen peroxide and resin finishes. High detergent value. Contains 20% active ingredients.

Neozymes[2] (nē′ō.zīms)

Desizing agents made up of amylolytic, proteolytic and fat splitting enzymes available in the form of crystalline powder or liquid concentrate for high or low temperature requirements.

Neozymes quickly remove all trace of starch glue or gelatin sizing without danger of damage to even the most delicate fabrics. For best results, use with NEOWET to speed saturation.

P

Parolite[2] (păr′ō.līte)

Zinc sulphoxylate formaldehyde in the form of white crystalline powder. A highly concentrated stripping agent for all forms of wool and modern synthetics.

Completely soluble in water. Leaves stripped goods soft, completely free of zinc dust and in most receptive condition for further processing. Often completely strips goods where other stripping agents fail. Very effective in discharge printing on acetate rayon.

V

Vatrolite[2] (văt′rō.līte)

Concentrated sodium hydrosulphite in the form of white crystalline powder. A powerful reducing agent for vat colors, ideal for dry feeding because of its free flowing, dustless character. Completely soluble in water.

Effective stripping agent for direct, sulphur and vat colors on cellulosic fabrics.

Quickly removes rust stains from cotton goods.

May be stored indefinitely.

Available with optical whites and in buffered formulas for high temperature use without excessive alkalinity.

Velvo Softener (vel′vō)

A highly sulphonated tallow in the form of a creamy white paste, easily dispersed in water. Used in general finishing of all types of textile fabrics. Will not "smoke off" or change color in high temperature operations such as calendering or drying. Has no effect on light fastness of colors.

Strategically placed warehouses plus company owned trucks add up to fast dependable delivery, every time.
